

INMOTION Controls, Inc.

342 Series Radio / Remote Control

INMOTION Controls' 342 Series Radio / Remote Control is a simple and convenient solution to an array of industrial applications. The System can be uniquely set up for pitch-and-catch operation, where two operators are operating a crane in tandem over a lengthy application. This capability lends itself to a safer and more efficient operation. A F-Type Antenna connector on the Receiver makes adding an extension of coaxial cable a quick, "do-it-your-selfer". The 342 Series holds true to the same safety standards exhibited by the rest of INMOTION's product line with its self-diagnostics, removable Transmitter key and E-Stop mushroom switch. An operating range of 300 feet, a pre-wired Receiving unit for easy installation, over 70 different Channels and over 1 million I.D. Codes to choose from make the 342 Series the ideal Radio Control Solution for your application. As with all INMOTION Controls products, the 342 Series comes with a standard one-year Warranty against all manufacturers' defects.
